Hairstyle Scissors

Scissors are the result of an unique combination aimed to the constant search for perfection: they are not simple instruments, but real jewels conceived for supporting hairstylers in their daily worl as silent and discret but decisive partners.

- **Cutting scissor** the scissor with smooth blade serves to cut your hair perfectly; it cuts definetly everything that passes among the blades.
- **Serrated scissor** for thinning the serrated scissor serves to remove and/or thin the hair. Thinning is an important operation because it aims to check, shape and thin the hair according to their anatomical structure. It is very useful for masking little cutting imperfections or for removing dry hair, producing soft contours on your face.
- **Serrated scissor for grooving** the scissor for grooving serves to create some grooves in lock of hair. It can be employed for thinning a lot of hair or for creating particular fringes, for conferring movement at the extremity of long hair, for flattening curly hair or for a more creative use.

After sales service

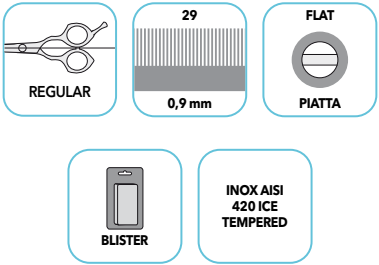

Even professional quality tools need periodic revisions, such as sharpening which, being performed exclusively by hand, requires experience and knowledge of the product

Needles for electrolysis have been realised in a unique body. This feature promotes an excellent conductivity, avoids dispersion and allows the use of lower power ratings. The particular blade's smoothness and the extreme tip's precision, guarantee an easy to use instrument for the worker.

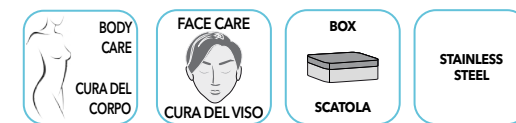

- They allow localising and easily penetrating the follicle
- They allow precisely falling down into the follicle without drilling the walls
- This product is sterilised and packaged in separable blisters

Tips for use

It is ideal for customers with healthy and strong skin that well react to the treatment

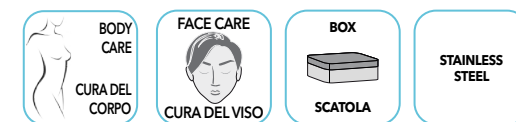

INOX ELECTRODE Derived from Swedish cromo-nichel 18/8 stainless steel, the steel employed for precision instruments. The micro-smoothness is used in order to obtain the round tip; it is realised in a unique body and this allows less electrical current intensity because there is no dispersion. The insertion is soft, precise and painless

**Ballet silver**

K2	54420010	0,055mm
K3	54420011	0,075mm
K4	54420012	0,1mm
K5	54420013	0,125mm
K6	54420014	0,15mm

Tips for use

It is ideal for customers with a high sensitivity caused by electrolysis

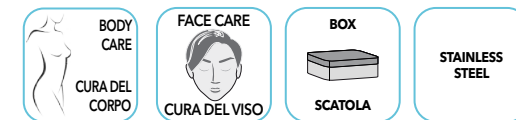

ISOLATED ELECTRODE Covered by a medical insulation and thick less than 1 micron. This special cover, conceived for dental prosthesis, allows a precise introduction into the follicle and it fits also for long-lasting treatment. Excellent promotion during intense treatments

**Ballet gold**

K2	54420020	0,055mm
K3	54420021	0,075mm
K4	54420022	0,1mm
K5	54420023	0,125mm
K6	54420024	0,15mm

Tips for use

It is ideal for allergy sufferer customers and for who have a high sensitivity to stainless steel punctiform electrodes

GOLD 24K ELECTRODE 24 carats gold plated without nichel. In medical fields, gold is employed for different purposes: from the needles for acupuncture to the pivots for drilling ears. The advantages are clear in electrolysis because reddening and swelling are reduced and the skin goes back to the normality. Perfect item for critical treatments, such as capillaries and sensitive skin
